

Abstract of the Disclosure

5 A packaging system includes, in addition to a packaging machine
of a known form-fill-seal type and a printer for printing on a bag-making film, a
packaging condition memory which stores packaging conditions for operating the
packaging machine, a print data memory which stores print data for operating the
printer, and a correlation data memory which stores the correlation data between
10 the packaging conditions and the print data. If a packaging condition is selected
through an input device, not only is the packaging machine operated under the
specified condition but also the printer is operated by the data which correspond
to the selected packaging condition according to the correlation data stored in the
correlation data memory.
